LENINGRAD

"Krylov" Shipyard, No. 194

Alternate Names: "Admiralty" Shipyard, "Marti" Shipyard

This yard is located on the southern bank and at the mouth of the southern branch of the Bolshaya Neva, just opposite the "Baltic" Yard.

The area of the yard occupies approximately 100 acres and includes the following shipbuilding facilities:

- A. Two shipbuilding ways, one of about 900 feet and the other about 750 feet.
- B. One idle mooring berth.
- C. Five fitting-out and repair berths.
- D. A new covered building berth.

It is estimated that the number of employees is about 10,000 and that they are engaged in the construction of tankers (10,000 ton displacement), icebreaking ferries, and bridge cranes. This yard is the builder of the famous atomic icebreaker, "Lenin."

Naval construction consists of cruiser and destroyer fitting-out and repair.
